

Why TRS Group Thermal Remediation?

We are so confident in our staff and technology that we will guarantee results.

TRS Group, Inc. is the most accomplished in situ thermal remediation company in the world with joint ventures in Brazil, Europe, and China. Launched in 2000, we have served a variety of markets and clients including: Fortune 500 Companies, Private Property Owners, Consulting Firms, the Department of Defense, and State and Federal Agencies.

What Sets TRS Apart?

The TRS leadership team was the first to commercialize Electrical Resistance Heating (ERH). Today, in addition to ERH, we also provide Thermal Conductive Heating (TCH) and Heat Enhanced Plume Attenuation (HEPA® Remediation) for the heat-enhanced remediation of volatile and semi-volatile organic and energetic compounds in soil and groundwater.

Customers find our expert team professional, conscientious, willing to share risk and easy to work with. In TRS, you will find a collaborative culture that facilitates the ability to achieve fast results and even exceed your most demanding cleanup objectives. Our goal is to create customers for life, which is why we will never abandon a project.

A Passion for What We Do

We take great pride in providing the safest, most effective remediation services possible for our clients. The high level of repeat business we receive is testimony to our commitment to excellence and customer service. More than 80% of our customers return to TRS when faced with site remediation challenges.

What Our Clients are Saying

"TRS is a nationally recognized and respected company that prides themselves on achieving client goals without change orders, within schedule, and for the best value."

"Within that silt, there were blebs of a mixed DNAPL/LNAPL, extremely elevated PID, and of course sheen and odor...After TRS ERH, only clean soil, no trace of a sheen or even a PID reading. I expected things to clean up but not be this clean!"

"The ERH remediation project that TRS completed in New Jersey in 2016, was the best performing project, and not just an in situ thermal remediation project, we have ever encountered."

TRS is Unmatched In:

1 Experience

With a long track record of over 160 successful cleanups worldwide since 2000, our group has more ERH experience than all the other thermal remediation companies combined.

2 Leadership

Our highly skilled and educated technical experts are recognized as the leaders of ERH remediation. Eighty percent of our staff hold technical degrees. Twenty-five percent are licensed engineers and geologists. Many also hold master and doctoral degrees.

3 Innovation

From rapid contaminant source zone remediation of soil to heat enhanced plume attenuation (HEPA® Remediation), TRS provides the latest technology advancements and unique proven remedial solutions.

4 Partnerships

TRS partners with engineering firms, government agencies, and property owners to execute comprehensive remediation projects and solve challenges that are inherent to site remediation.

5 Assurance

We are so confident in our staff and technology that we offer Guaranteed Fixed Price Remediation (GFPR) and 100% Money Back Guaranteed Remediation (MBGR) contracting. TRS has provided performance guarantees on 30% of our projects.

6 Vision

From a small start-up with a strong belief in customer service and advanced thermal solutions to remediate the most challenging sites, TRS is now an international enterprise employing nearly 70 employee-owners. This enhances productivity by providing channels for workers' ideas and talents.

SAFE. FAST. CERTAIN. GUARANTEED.

Proven Results from Over 18 Years and 160 Sites

An Employee Owned Company
